

# MU Certified Strip Trial Program

## 2018 Fungicide Trial Harvest Report

**Site Number: 11 (Lincoln County)**

**Extension Contact: Charles Ellis (636-795-5378)**

### **Trial Harvest Summary**

This is a fungicide trial comparing the effect of yield on using fungicide versus no fungicide in treatment strips across the field. The field was sprayed for fungicide on July 17<sup>th</sup> and harvested on October 22<sup>nd</sup>. The mean difference between the treatment strips was 0.2 bushels per acre, but the difference at this location was not statistically significant in our initial analysis.

The field was scouted for foliar diseases on July 2<sup>nd</sup> and August 9<sup>th</sup>. Of the 40 points in the field that were scouted for foliar disease, there was little to no foliar disease observed at either scouting time and no statistical differences were observed for Septoria Brown Spot and Frogeye Leaf Spot between the treatment strips.

Please note the section towards the end of the report that summarizes management information currently known about the trial. Missing information is highlighted in yellow. Please provide your extension contact the missing information as soon as possible and let us know if any other corrections or changes need to be made.

At the end of the report is a table summarizing yield results from all of the fungicide trials. Please note that all of the analysis is preliminary.

The MU Strip Trial program will have meetings throughout Missouri in February of 2019. *More information on location and dates will be sent out soon.* We encourage you to attend the strip trial meeting that is closest to you. This will be an opportunity for discussion on what was learned across farms and multiple years of trials. It will also be an opportunity for you to give feedback on how the trial worked on your farm and provide ideas for future trials.

Please follow us on Twitter at @MUStripTrials!

Thank you for agreeing to do this trial! It is one of 11 fungicide trials in 2018.

*The mission of the MU Certified Strip Trial Program is to help farmers validate management decisions on their farm and document efficiency and environmental stewardship.*

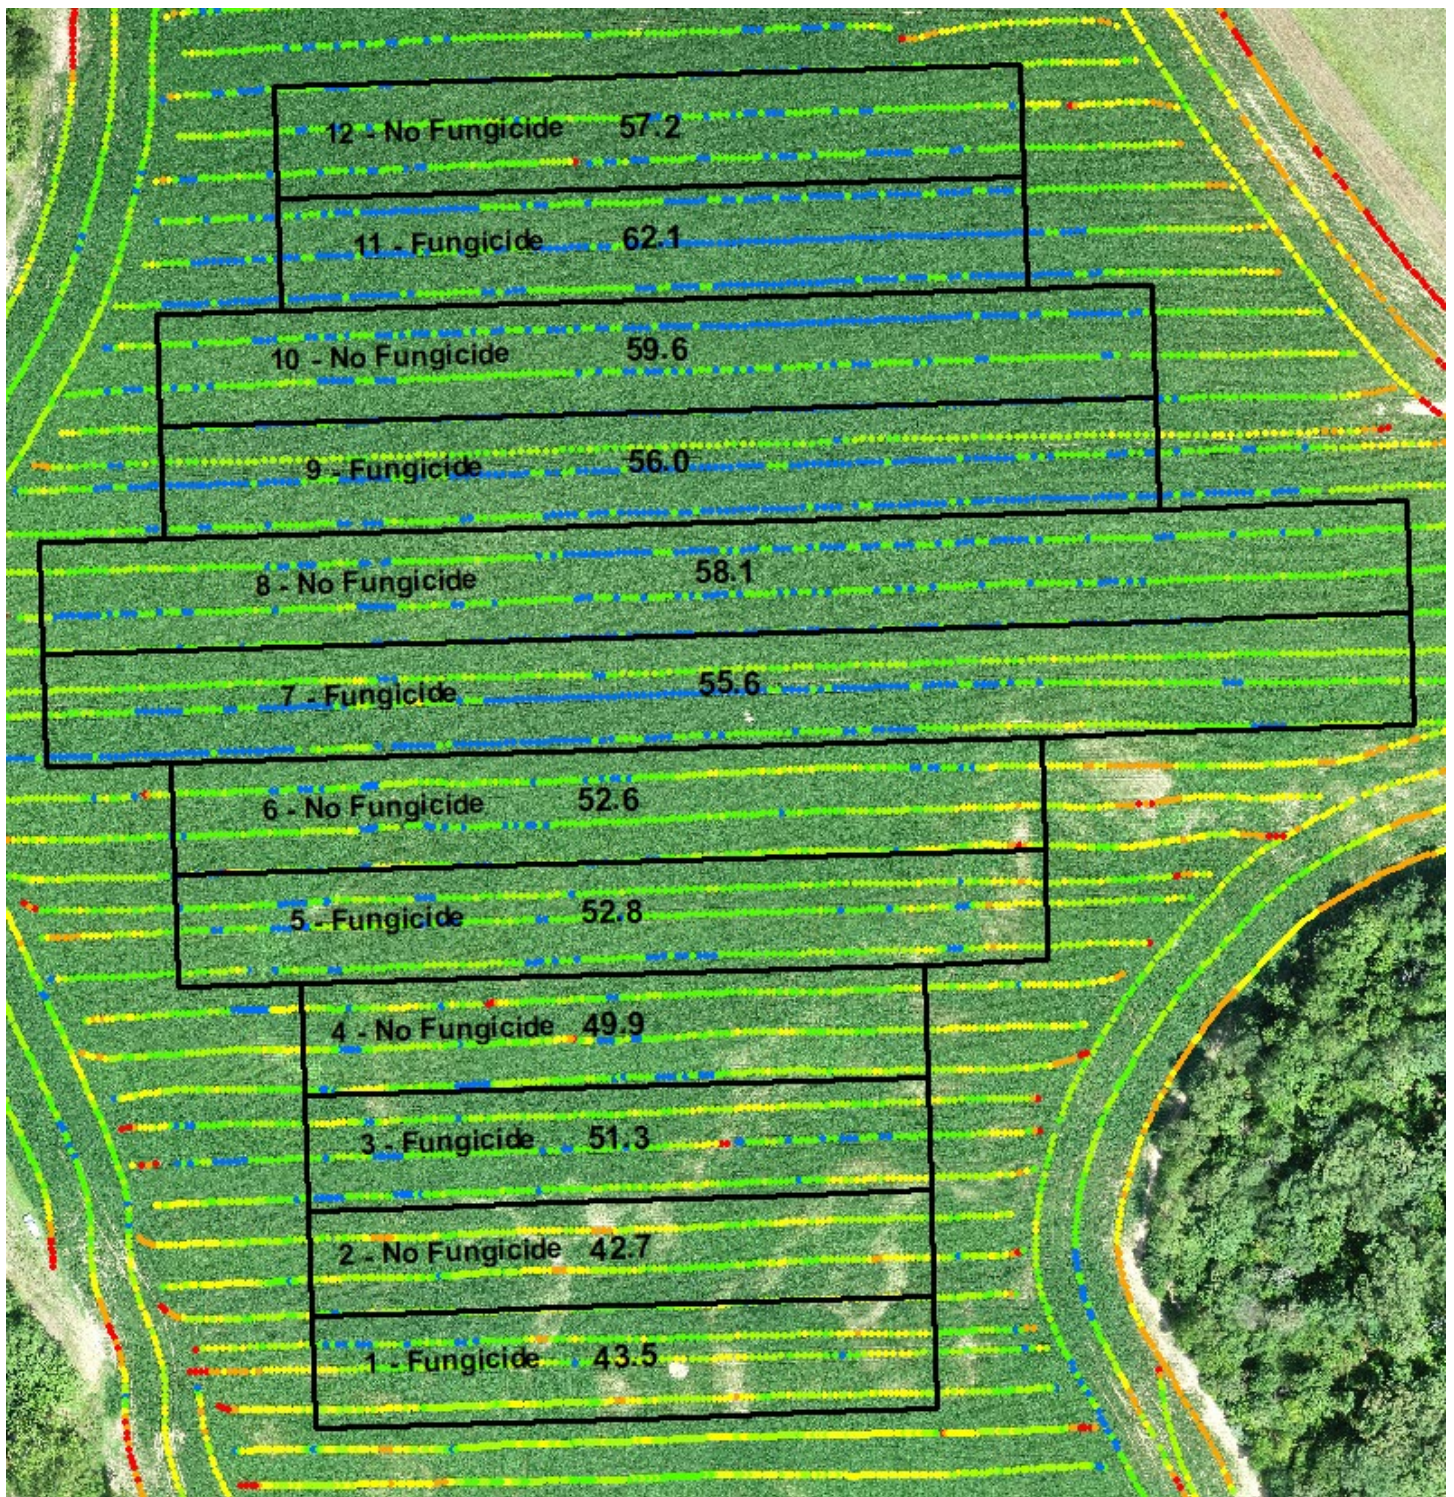

**The MU Certified Strip Trial Program is funded by:**

**MU Extension, the Missouri Soybean Merchandising Council and the Missouri Corn Merchandising Council.**

● < 20 bu/A   ● 20 – 30 bu/A   ● 30- 40 bu/A   ● 40 – 50 bu/A   ● 50 – 60 bu/A   ● >60 bu/A

**Figure 1a.** Soybean yield monitor data reported as bushels per acre (bu/A). Strips are labeled with their respective treatments: fungicide or no fungicide. The field was harvested October 22, 2018.

● < 20 bu/A   ● 20 – 30 bu/A   ● 30- 40 bu/A   ● 40 – 50 bu/A   ● 50 – 60 bu/A   ● >60 bu/A

**Figure 1a.** Close up strips showing soybean yield monitor data reported as bushels per acre (bu/A). Strips are labeled with their respective treatments: fungicide or no fungicide.

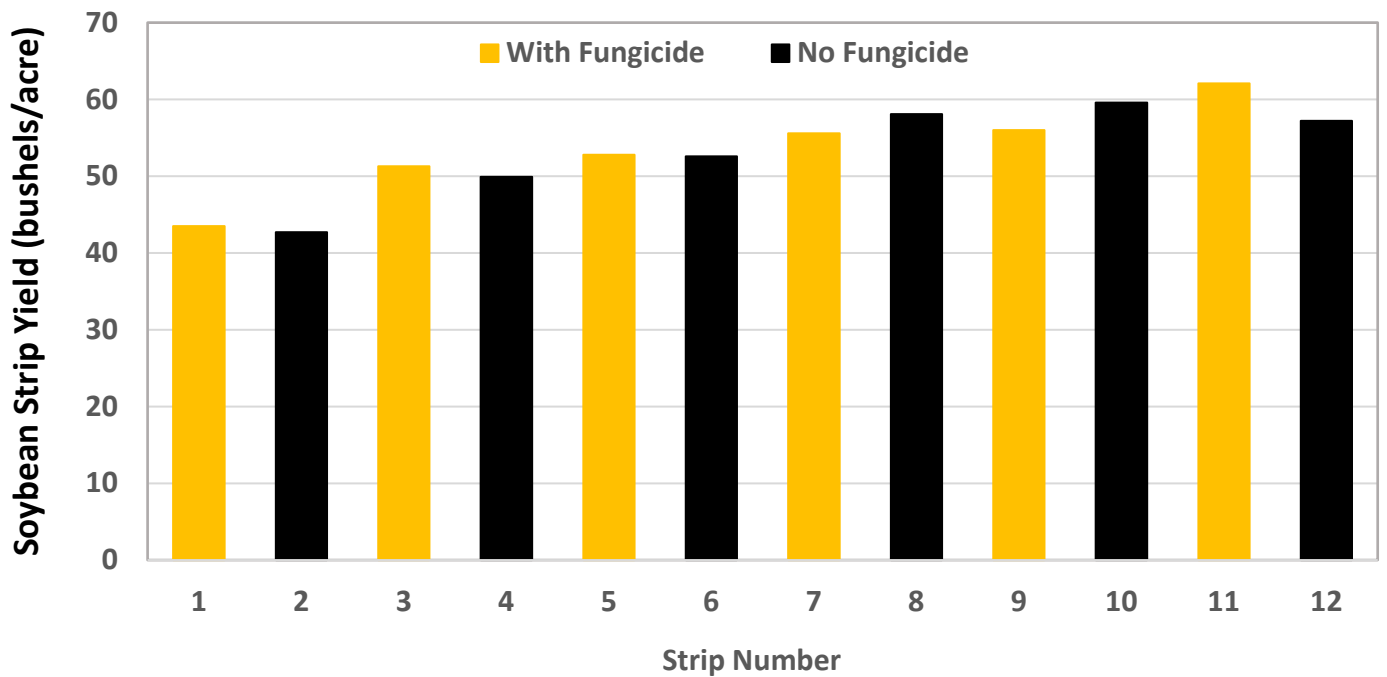

**Table 1/Graph 1.** Strip means of soybean yield.

**Mean soybean yields:**

Mean of all Strips: 53.4 bushels/acre  
 Mean of strips with Fungicide: 53.6 bushels/acre  
 Mean of strips with no Fungicide: 53.3 bushels/acre  
 Treatment Difference: 0.3 bushels/acre

Preliminary analysis shows that this difference was not statistically significant.

| Strip                | 1    | 2    | 3    | 4    | 5    | 6    | 7    | 8    | 9    | 10   | 11   | 12   |
|----------------------|------|------|------|------|------|------|------|------|------|------|------|------|
| Treatment            | With | No   | With | No   | With | No   | With | No   | With | No   | With | No   |
| Yield (Bushels/Acre) | 43.5 | 42.7 | 51.3 | 49.9 | 52.8 | 52.6 | 55.6 | 58.1 | 56.0 | 59.6 | 62.1 | 57.2 |

## Grain Crop Management Information

| Planting Date   | Variety        | Seeding Rate | Harvest Date |
|---|----------------|--------------|--------------|
| 5/26/18   | Stine 42LH02   | 155,000      | 10/22/2018   |
| Previous year's crop: Corn  |                |              |              |
| Does this field have a history of foliar disease? Yes                         |                |              |              |
| If yes, please list dates and diseases: Low levels of frogeye and SDS in 2012 |                |              |              |
| Crop Rotation   | Corn - Soybean |              |              |
| Tillage System  | No Till        |              |              |

## Input Information

| Date    | Type of Input | Product Name | Rate Applied |
|---------|---------------|--------------|--------------|
| 7/17/18 | Fungicide     | Trivapro     | 13.7 oz/Acre |
|         |               |              |              |
|         |               |              |              |
|         |               |              |              |

## Equipment Specifics

| Equipment     | Type           | Width (in feet) |
|---------------|----------------|-----------------|
| Planter       | Kinze 3600 ASD | 40              |
| Sprayer       | Apache AS715   | 90              |
| Combine       | Case IH 7088   | 35              |
| Yield Monitor | Case Pro 600   |                 |
